

# SAFER WORK DRIVING

## CALCULATE YOUR OWN SAVINGS

Industry figures show the average cost of repairs for collision damage is \$2010 (AAMI). Add to this on-costs and hidden costs of 4 to 5 times this figure – assume a factor of 4 and the typical collision is really costing your organisation around \$8000.

Now fill in the figures to calculate your own savings.

Step	Instruction	Your Answer
1	Number of vehicles	<b>A</b>
2	Average number of collisions per vehicle per year	
3	Total collisions all vehicles per year	<b>C</b>
4	Costed at \$8000 per accident	<b>D</b>
5	Assume 30% reduction in number of collisions	<b>E</b>
	This gives you an estimate of the potential savings per year
