CONTENTS

AADTs ordered by Screenline Number 5

AADTs ordered Alphabetically by Street Name 13

AADTs ordered by SCATS Traffic Count Site Number 47

EXPLANATORY NOTES

1.0 INTRODUCTION

This book incorporates the results of a traffic survey undertaken during **1999 in RTA Sydney Region** as part of a three year repeating cycle covering the whole of the State of NSW and is comprised of six parts in two volumes:

Volume 1:-

- Part 1. AADTs ordered by Screenline Number
- Part 2. AADTs ordered Alphabetically by Street Name
- Part 3. AADTs ordered by SCATS Traffic Count Site Number
- Part 4. Hourly Distribution of Traffic Volumes (for permanent stations only)
- Part 5. Traffic Volume Location Maps

Volume 2:-

- Part 6. Daily Distribution of Traffic Volumes (for permanent stations only)

2.0 STRUCTURE OF THE PUBLICATION

Part 1 (Volume 1) lists the stations and their **combined directional** (both directions) AADT in order along each numbered screenline.

The delineation of screenlines and cordons enables the minimum number of stations to be selected for a complete census of inbound and outbound traffic crossing between zones defined by the screenlines and cordons. Screenlines and cordons are similar, except that cordons completely enclose selected areas, such as the City of Parramatta. Both screenlines and cordons were designed, where possible, to follow natural barriers to road communication such as railway lines and watercourses.

Part 2 (Volume 1) lists the stations and their **combined directional** AADT in alphabetical order of street names.

Part 3 (Volume 1) lists the stations ordered by site number showing AADT **by approach** (inbound) to SCATS intersections from each direction. The listing includes the traffic control signal number (TCS) and pattern station number (PATT) used in estimating AADT.

Part 4 (Volume 1) lists the HOURLY distribution of traffic volumes for a sample week at Permanent Stations by the hour of day and day of week and includes the percentages of average HOURLY for weekdays, weekends and whole of week to corresponding total HOURLY traffic volumes.

Sample weeks of Hourly distribution were selected to exclude public holidays and other abnormal influences where possible. Nevertheless Hourly distributions may not be representative of annual average HOURLY traffic patterns.

Summary statistics presented at the foot of the **Hourly Traffic Volume** table are:

- Daily, weekend and weekly totals
- **ADT** by direction (Average Daily Traffic)
- **AWT** by direction (Average Weekday Traffic)
- **AWE** by direction (Average WeekEnd Traffic)

Part 5 (Volume 1) presents the scales, indices and maps of the Survey Area.

The set of maps consists of:-

- Map Scales
- Sydney UBD Equivalence Table
- Key Map
- Screenlines Map
- ANZAC Bridge, Western Distributor Map
- Urban Maps (including City of Blue Mountains)

Screenlines are shown as numbered continuous red lines.

The locations of non-SCATS traffic counting stations are indicated on the maps by a red dot, with a joining line to the station number above the line and associated AADT value below the line.

The locations of SCATS traffic counting stations are indicated on the maps by a red circle and site number without associated count data.

Non-SCATS stations surveyed in 1993 or 1996, but not surveyed in 1999 are indicated on the maps without their AADT values. Non-SCATS stations surveyed prior to 1993, but not surveyed since, are indicated on the maps by a red dot **only**.

Part 6 (Volume 2) lists daily traffic volumes by day of week, week of year and percentage of weekly to whole of year traffic volume in order of permanent station number. The majority of surveyed stations have directional counts, with a minority having combined directional counts.

Summary statistics presented at the foot of the **Daily Traffic Volume** table are:

- Annual average by day of week and weekly totals
- **AADT** by direction (Annual Average Daily Traffic)
- **AAWT** by direction (Annual Average Weekday Traffic)
- **AAWE** by direction (Annual Average WeekEnd Traffic)
- **AAPH** by direction (Annual Average Public Holiday Traffic)

3.0 STATION TYPES & AADT DEFINITIONS

Traffic survey sites are either designated as **sample (short survey duration)** stations or as **permanent (continuous survey duration)** stations. As either axle pair passes or actual vehicles may be counted, the **annual average daily traffic (AADT) TYPE** is represented as either:

- The number of **vehicles** passing during a 24 hour period averaged over a year **OR**
- The number of **axle pair** passes during a 24 hour period averaged over a year

For example, with axle pair passes, a typical car is represented by one axle pair, a three axle truck by one and a half axle pairs and a six axle semi trailer as three axle pairs.

It should be understood that AADTs measured by counting vehicles is not equivalent to AADTs measured by axle pair passes and that SCATS (Sydney Co-ordinated Adaptive Traffic System) traffic volumes with very few exceptions cannot be converted into equivalent AADTs measured by counting vehicles (as given in parts 1 and 2).

AADT by is measured by axle pairs at urban and rural sample stations, rural permanent stations and a few urban permanent stations. AADT is measured by vehicles at most urban permanent stations and at SCATS sample stations.

AADT values in parts 1 and 2 are for combined directions and AADT values in part 3 are by INTERSECTION APPROACH. Hourly and daily traffic counts by direction in parts 4 and 6 are indicated by a suffix to station number:

- N = Northbound
- S = Southbound
- E = Eastbound
- W = Westbound
- C = Combined (Non directional)

4.0 SYMBOLS EMPLOYED

The symbol star (★) indicates AADT measured by vehicle counts and the symbol (T) indicates AADT measured by axle pairs, **BOTH AT ONLY PERMANENT STATIONS**. The symbol (Red circle) indicates AADT measured by vehicle counts at SCATS sample stations on the maps, but no symbol is used in part 3. Symbols are not used to indicate AADT measured by axle pairs at sample stations.

The symbol star (★) or symbol (T) is affixed to AADT values by year in parts 1 and 2 to differentiate between AADT types where a station has changed between sample and permanent status between surveys.

The symbol star (★) for vehicle counts or the symbol (T) for axle pairs is **ALSO** affixed to station number in parts 1, 2 and 5 (maps) where a station is permanent for **AT LEAST THE 1999 SURVEY YEAR**. As a station may previously be a sample site, confirmation of permanent status for earlier years can be made with reference to parts 1 and 2 only

If a station has had permanent status for all the survey years presented, then the symbol star (★) or symbol (T) is affixed to station number **ONLY** in parts 1 and 2 only. No symbols are then affixed to AADT values.

Eg

STATION	ROAD	LOCATION	MAP	1985 AADT	1987 AADT	1989 AADT	1991 AADT	1993 AADT	1996 AADT	1999 AADT
T73.097	ANNANGROVE RD	ANNANGROVE-E OF PUBLIC SCHOOL	21	4434	5231	5031	5803	6058	6147	6553
12.012	ANZAC PDE,MR171	KINGSFORD-N OF DAY ST	3	32867	36778	37978	38274	39415T	40954	41947*
03.014	ANZAC PDE,MR171	MOORE PARK-S OF GRAND DR	3	43842T	--	--	--	--	54331	59814
02.359	ANZAC PDE,MR171	MOORE PARK-S OF MR528,DACEY AVE	3	--	--	--	--	34463	34225	40175

An asterisk (*) against the station number indicates Permanent status, counting **vehicles** for the current survey year (1999)

The symbol (T) against the AADT value for 1985 indicates permanent station status counting **axle pairs** in that year. The absence of any symbol against other AADT values for 1996-1999 indicates sample station status, still counting **axle pairs**.

The symbol (T) against the station number and no symbols against AADT values indicates permanent status, counting **axle pairs** for both current survey year (1999) and all prior years shown.

The symbol (T) against the AADT value for 1993 indicates a change in station status from sample to permanent in that year, still counting **axle pairs**. An asterisk (*) against the AADT values from 1996 onwards still indicates permanent status, but now counting **vehicles**.

5.0 STATION STATUS

Station status is identified as :-

- (a) **Sample station with all AADT values measured by axle pairs** but not indicated by symbols anywhere in text or maps or as a **Sample (SCATS) station with all AADT values measured by vehicle counts** not indicated by symbols for SCATS stations in part 3, but shown as red circles O in part 5 (maps).
- (b) **Permanent station with all AADT values measured by vehicle counts** indicated by the symbol star (★) or as **permanent station with all AADT measured by axle pairs** indicated by the symbol (T) against station number in parts 1,2 and 5 (maps), (not in parts 4 and 6).
- (c) **Stations changed between sample and permanent status with corresponding changes in AADT values between vehicle counts and axle pairs**, are differentiated by affixing AADTs measured when permanent status (only), by either the symbol star (★) for vehicle counts or by the symbol (T) for axle pairs in parts 1 and 2 only.

**AADTs ordered by
Screenline Number**
