

TRAFFIC VOLUME DATA FOR SYDNEY REGION 2002

**Roads and Traffic Authority
New South Wales**

Prepared by the RTA Traffic and Transport Directorate

© COPYRIGHT ROADS AND TRAFFIC AUTHORITY 2003

Although every effort has been made to ensure the quality of the data, the NSW Roads and Traffic Authority cannot guarantee the accuracy of the data and does not accept responsibility for any consequences arising from its use.

Maps were prepared by Spatial Information Systems Unit, RTA. The base maps were supplied by Sensis Pty Ltd. 2002.

CONTENTS

Part 1. AADTs ordered by Screenline Number	7
Part 2. AADTs ordered Alphabetically by Street Name	13
Part 3. AADTs in City of Blue Mountains Local Government Area (LGA) ordered by Road Number	45
Part 4. AADTs for SCATS stations ordered by Station Number	49

The opening of the Eastern Distributor in Dec 1999, the new Woronora Bridge in Feb 2001 and the M5 East Motorway in Dec 2001 were followed by changes in traffic distribution.

EXPLANATORY NOTES

1.0 INTRODUCTION

This book incorporates the results of a traffic survey undertaken during **2002 in RTA Sydney Region** as part of a three year repeating cycle covering the whole of the State of NSW and is comprised of seven parts in two volumes:

AADT is the Annual Average Daily Traffic assessed as the total volume of traffic recorded at a specific road location (known as a traffic station) taken over a calendar year and divided by the number of days in that year.

Volume 1:-

- Part 1. AADTs ordered by Screenline Number
- Part 2. AADTs ordered Alphabetically by Street Name
- Part 3. AADTs in City of Blue Mountains Local Government Area (LGA) ordered by Road Number
- Part 4. AADTs for SCATS stations ordered by Station Number
- Part 5. Hourly Distribution of Traffic Volumes ordered by Station Number (for permanent stations only)
- Part 6. Traffic Volume Location Maps

Volume 2: -

- Part 7. Daily Distribution of Traffic Volumes ordered by Station Number (for permanent stations only)

2.0 STRUCTURE OF THE PUBLICATION

Part 1 (Volume 1) lists the stations and their AADT by **combined directions** in order along each numbered screenline.

The delineation of screenlines and cordons enables the minimum number of stations to be selected for a complete census of inbound and outbound traffic crossing between zones defined by the screenlines and cordons. Screenlines and cordons are similar, except that cordons completely enclose selected areas, such as the City of Parramatta. Both screenlines and cordons were designed, where possible, to follow natural barriers to road communication such as railway lines and watercourses.

Part 2 (Volume 1) lists the stations and their AADT by **combined directions** in alphabetical order of street names.

Part 3 (Volume 1) lists the stations and their AADT by **combined directions** in road number order for the City of Blue Mountains LGA.

Part 4 (Volume 1) lists the **SCATS** (Sydney Co-ordinated Adaptive Traffic System) stations and their AADTs taken as **inbound** to their associated road intersections and ordered by station number. The listing includes the Traffic Control Signal (TCS) numbers in the location descriptions and the pattern station numbers used in estimating AADTs.

Part 5 (Volume 1) lists the hourly distribution of traffic volumes for a single week at each Permanent Station by the hour of day and day of week for each direction of traffic flow. The listing includes the total, average and percentages of hourly traffic volumes for weekdays, weekends and whole of week for each corresponding hour.

Single weeks of Hourly distribution were selected to exclude public holidays and other abnormal influences where possible. Nevertheless Hourly distributions may not be representative of annual average hourly traffic patterns.

Summary statistics presented at the foot of the **Hourly distribution** table are:

- Daily, weekday, weekend and weekly totals
- **MAX** (Maximum hourly flows)
- **AWT** (Average Weekday Traffic)
- **AWE** (Average Weekend Traffic)
- **ADT** (Average Daily Traffic)

Part 6 (Volume 1) lists the LGAs, traffic station status and attributes and maps of the Survey Area as follows: -

- List of LGAs
- Legend
- Regional Map Index
- Screenlines Map Index
- Detailed Street Directory Maps

Each detailed map displays the screenlines, station locations and permanent status (if applicable) and year 2002 AADT value if available.

Part 7 (Volume 2) lists the daily traffic volumes of the permanent stations by day of week and week of year in order of station number. The majority of surveyed stations have directional counts, with a minority having combined directional counts.

Summary statistics presented at the foot of the **Daily Traffic Volume** table are:

- Annual average by day of week and weekly totals
- **AADT** (Annual Average Daily Traffic)
- **AAWT** (Annual Average Weekday Traffic)
- **AAWE** (Annual Average Weekend Traffic)
- **AAPH** (Annual Average Public Holiday Traffic)

3.0 STATION TYPES & AADT DEFINITIONS

Traffic survey stations are either designated as **sample (short survey duration)** stations or as **permanent (continuous survey duration)** stations. The **AADT type** is represented during a 24-hour period averaged over a year as the number of:

- **Axle pair** passes or
- **Vehicle** passes or
- **SCATS recorded vehicle** passes

For example, with axle pair passes, a typical car is represented by one axle pair, a three axle truck by one and a half axle pairs and a six axle semi trailer as three axle pairs.

It should be understood that AADTs measured by counting vehicles is not equivalent to AADTs measured by axle pair passes and that SCATS traffic volumes with very few exceptions cannot be converted into equivalent AADTs measured by counting vehicles (as given in parts 1 and 2).

AADT is measured by axle pairs at urban and rural sample stations, most rural permanent stations and a few urban permanent stations. AADT is measured by vehicles at most urban permanent stations and at SCATS sample stations.

AADT values in parts 1 and 2 are for combined directions and AADT values in part 3 are by SCATS Intersection Approach (N = Northern Approach, S = Southern Approach, E = Eastern Approach, W = Western Approach)

eg

00.026 ANZAC PDE(N/S) BARKER ST(E/W).KENSINGTON-TCS 1189

Non Scats hourly and daily traffic counts by direction in parts 5 and 7 are indicated by a suffix to station number:

eg

N = Northbound
S = Southbound
E = Eastbound
W = Westbound
C = Combined directions

4.0 MAP SYMBOLS EMPLOYED FOR TRAFFIC STATION LOCATIONS AND ASSOCIATED AADTS

Major Screenlines are shown as numbered continuous red lines and Minor Screenlines as numbered dashed red lines.

Traffic Station locations and associated AADTs are identified by:-

- (a) Non-SCATS sites are indicated on the maps by a red dot, with a joining line to the **station number** above the line and **associated AADT value** below the line.

- (b) SCATS sample sites are indicated on the maps by a red circle, with a joining line to the **station number** without **associated AADT value**.

The associated AADTs (as vehicle counts) at SCATS stations are presented in part 4, but are not displayed on the maps.

- (c) Non-SCATS sites surveyed in 1996 or 1999, but not surveyed in 2002 are indicated on the maps without their AADT values. Non-SCATS sites surveyed prior to 1996, but not surveyed since, are indicated on the maps by a red dot only.

5.0 SYMBOLS FOR TRAFFIC STATION STATUS & ATTRIBUTES

The symbol (V) for AADT as vehicle counts and the symbol (*) for AADT as axle pairs are used **EXCLUSIVELY TO INDICATE PERMANENT STATIONS**.

The symbol (V) or symbol (*) is affixed directly to AADT values in parts 1, 2 and 3 (only) to indicate the years and type of permanent station status and to indicate the survey years when a station changed between sample and permanent status.

The symbol (V) for vehicle counts or the symbol (*) for axle pairs is **ALSO** affixed to station number in parts 1, 2, 3 and 6 (maps) where a station is permanent for **AT LEAST THE 2002 SURVEY YEAR**. **On maps these symbols are located next to the station site numbers**. No symbols are displayed in parts 5 and 7.

The symbol (V) or symbol (*) is affixed to station number **ONLY (Not to the associated AADT values)**, where the station had permanent status for all survey years as presented in parts 1, 2 and 3.

eg

STATION	ROAD	LOCATION	MAP	1987 AADT	1989 AADT	1991 AADT	1993 AADT	1996 AADT	1999 AADT	2002 AADT
V72.013	JAMES RUSE DR, SH13	NORTHMEAD-E OF WINDSOR RD	21	--	--	--	--	75409	70715	73213
*99.037	MR516	BELL-W OF MR184, BELLS LINE OF RD	57	3980	3650	3301	3530	4336	3227	3100
V72.001	WINDSOR RD, MR184	KELLYVILLE-N OF MR157, SHOWGROUND RD	7	28120	32714*	34515*	35151V	40141V	42984V	45608V
69.094	RICHMOND RD-SL2	BLACKTOWN-AT RAILWAY OVERBRIDGE	21	18392*	--	--	18822	--	1630	1632

The symbol (V) against the **station number** and no symbols against AADT values indicates **permanent** status, counting **vehicles** for both current survey year (2002) and all prior years shown.

An asterisk (*) against the **AADT value** for 1987 indicates **permanent** station status counting **axle pairs** in that year. The absence of any symbol against other **AADT values** for 1993-2002 indicates **sample** station status, still counting **axle pairs**.

An asterisk (*) against the **station number** and no symbols against AADT values indicates **permanent** status, counting **axle pairs** for both current survey year (2002) and all prior years shown.

A asterisk (*) against the **AADT value** for 1989 indicates a change in station status from **sample** to **permanent** in that year, still counting **axle pairs**. A symbol (V) against the **AADT values** from 1996 onwards still indicates **permanent** status, but now counting **vehicles**.

Symbols are not used to INDICATE SAMPLE STATIONS or AADT values, where measurement was by axle pairs
